

Isotop® DZE

Multi-part element stainless steel

Design

Isotop® DZE is a multi-part element consisting of stainless steel and two different insulation materials: Sylodyn® and Sylomer® HD. Combined they are resilient to pressure and tensile loading. Due to the spring/damper combination the transmission of vibration can be isolated precisely and effectively and strong amplitudes will be debilitated. The continuous steel axis with its welded-on baseplate endures strong horizontal forces as well as massive negative impulses like e.g. windloads.

Field of application

Isotop® DZE elements can be adjusted individually down to a natural frequency of approx. 7 Hz depending on the load.

Various applications, for example elastic isolation of:

- Compressors
- Pumps
- Cooling towers
- Fast rotating machines
- HVAC
- Roof-top devices
- Emergency power units
- Vibration isolation of all kinds

Required data for selection

- Total weight to be absorbed
- Number and location of points of support
- Centre of gravity
- Structural shape of the device
- Direction of load
- Lowest disturbing frequency
(rotational speed or number of strokes)

Isotop® DZE

Advantages

- Different combinations of spring/damper elements depending on the load of the device allow ideal frequency tuning.
- Premounted elements ensure fast assemblage
- Demolition-proof – especially advisable for narrow and tall devices or mobile applications
- Long durability
- Low resonant frequency
- Low construction height

Our service

Make use of our know-how on questions about vibration technology. We will gladly consult you and will calculate tailor-made solutions for vibration isolation.
